

DataOne VINTransport™ provides the data needed for basic vehicle identification as well as for transportation logistics.

We recognize that as a transportation provider or an IT solution provider to the transportation industry – your data requirements may vary greatly from client to client.

- data for reconditioning and claims
- data for reporting
- data for logistics and operations planning

Our VINTransport™ product provides simple VIN decoding and can also include vehicle weights and dimensions for your logistics and planning modules.

Additional data is available through add-on tables. New vehicle values, option pricing, and equipment lists are available for larger enterprise solutions supporting transportation by rail, ship, or road. Media can also be provided where needed – including a stock photo library from 1995 forwards.
